

# Limited Edition Band

## Technical Requirements

Freddie Stevens - leader

(410)581-2000

fax (410)581-3025

Please fax or mail a copy of this flyer to your banquet manager or other site contact. Let us know if any of these requests are not possible.

### Stage/Performance area requirements:

For our 9-pc band a 12' x 24' stage or performance area is a preferred minimum area. We can work with less, but would prefer to know in advance how much less.

For ensembles of 6-7 pieces, please allow at least 8' x 24'.

### Electrical requirements:

Four (4) separate electrical circuits adjacent or convenient to performance area.

Circuits should be 20 amps each, 110v.

A power distribution or "breakout box" next to the stage is ideal.

**Please note: We cannot include stage lighting if working with less than three separate circuits.** Banquet managers: Please check with your A/V department or electrical engineer if you have any doubts about where the separate circuits or breaker boxes are located! It may very well save a lot of time and/or "panic" on the day of the party.

### Set-up time:

A careful and thorough set-up and sound check generally requires about 2-2.5 hours.

At least one full hour of unobstructed access to the performance area is an absolute minimum. Keep in mind that a single hour (i.e. hasty setup) will probably not allow for a PA system sound check and/or adjustment.

Please advise us if there are logistical considerations that will prevent our having full access for set-up (i.e. ceremony in same room, etc.)

### Storage/Dressing areas:

It is important that we have a secure area to store our empty footlockers, instrument cases, clothes bags, purses, etc.

Ideally, we should have a comfortable area to "chill" while on breaks, to change clothes, and perhaps to eat a light meal.
