

TECHNICAL REQUIREMENTS

Please fax or mail a copy of this flyer to your banquet manager or other site contact.
Let us know if any of these requests are not possible.

STAGE/PERFORMANCE AREA REQUIREMENTS:

- A 12' x 24' stage or performance area is a preferred minimum.
- In addition, please allow an area for our sound/lighting technicians and mixing consoles just off the stage to the band's left. This space should be at least 4' x 8'.

ELECTRICAL REQUIREMENTS:

- Three (3) separate electrical circuits (not outlets), convenient to the performance area. Circuits should be at least 15 amps each, 110v. A power distribution or breakout box is ideal.
- Please note: We may not be able to include stage lighting if working with less than three separate circuits.
- Banquet managers: Please check with your A/V department or electrical engineer if you have any doubts about where the separate circuits or breaker boxes are located! It may very well save a lot of time and/or “panic” on the day of the party.

SET-UP TIME:

- A careful and thorough set-up and sound check generally requires about 2 - 2.5 hours. Our crew prefers to arrive 3 hours before the first set is to commence.
- At least one full hour of unobstructed access to the performance area is an absolute minimum. Keep in mind this will not allow for much, if any, sound check.
- Please advise us if there are logistical considerations that will prevent our having full access for set-up.

STORAGE / DRESSING / VENDOR MEALS:

- It is important that we have a secure area to store our empty footlockers, instrument cases, clothes, bags, purses, etc.
- Ideally, we should have a comfortable area to “hang out” while on breaks, to change clothes, and perhaps to eat a simple meal.
- If vendor meals are provided for the band, there are 12 members total, 6 are vegetarian. Thanks!
